

Missouri River Basin – Weekly Update – 12 December 2017

Mainstem Reservoir Status:

- ❖ System storage is 57.2 million acre-feet (MAF), 1.1 MAF above the base of the Annual Flood Control and Multiple Use Zone.
- ❖ Warmer-than-normal temperatures are expected throughout the basin for the next 14 days. As the colder, winter temperatures begin to enter the basin, river ice formation downstream of all the mainstem projects will be monitored and releases will be adjusted accordingly.
- ❖ The current release rate from Gavins Point Dam is 21,500 cfs, which is the planned winter release rate. Releases will be adjusted as necessary due to weather conditions.
- ❖ Gavins Point (GAPF) release schedule and Missouri River stages can be found here:
