

Mainstem Reservoir Status:

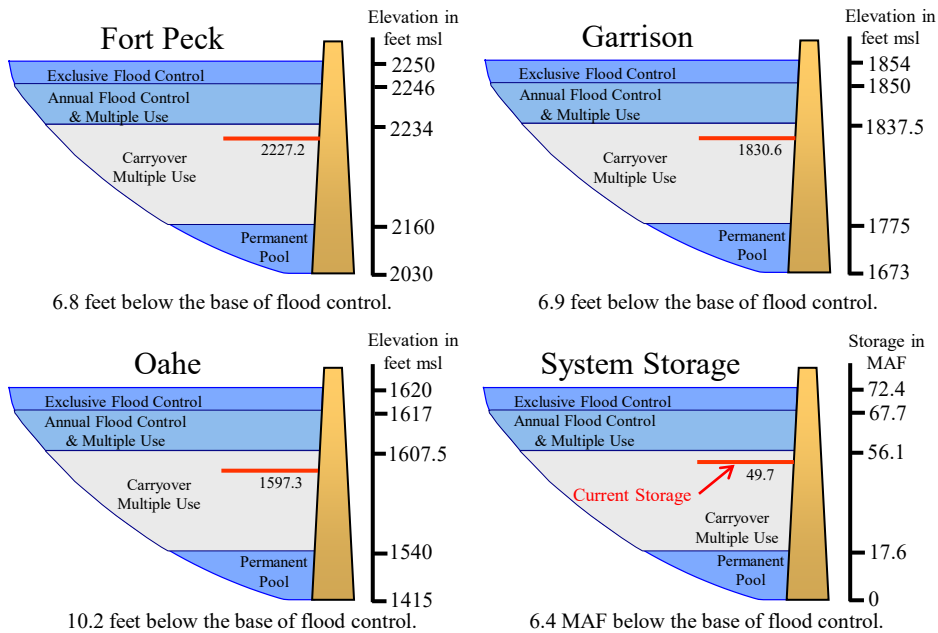

- ❖ System storage is 49.7 MAF, 0.3 MAF less than last week (upper right quadrant).
- ❖ The 2021-2022 Draft AOP has been posted to our website ([click here](#)). Comments should be provided to this office by November 24, 2021.
- ❖ NOAA is forecasting additional precipitation in the Basin over the next 48 hours (lower right quadrant). Gavins Point releases were reduced yesterday in response to the precipitation already received over the weekend and will be adjusted as necessary due to Basin conditions.
- ❖ Fall in-person public meetings are taking place this week. Details for locations, dates, and times can be found in our press release ([click here](#)).
- ❖ Per the Master Manual, support for the 2nd half of the navigation flow support season (July 1 to December 1) is 1,500 cfs less than full service ([click here](#)).
- ❖ The navigation flow support will be a full 8-month season.
- ❖ Refer to the 3-Week Forecast ([click here](#)) for the most up-to-date System information – pool levels, inflows, and releases.

System Storage Comparison

*In January 2011, the Base of Flood Control was 56.8 MAF, and the Top of Exclusive Flood Control was 73.1 MAF.
