Mainstem Reservoir Status:

- System storage is 46.9 MAF, 0.3 MAF less than last week (upper right quadrant). Current and projected System storage is shown on the plot.
- For the November monthly study with forecasted pool levels and releases for each mainstem project (click here).
- The Gavins Point release will be adjusted to meet the current service level of 500 cfs above minimum service, per the Master Manual. Releases are currently 31,000 cfs. Releases will be stepped down starting around November 19 to a 12,000 cfs winter release. The release schedule for Gavins Point is provided in our daily forecast (click here).
- Temperatures are 70-100% likely to be below normal across the entire Basin next week. Precipitation received during this time is likely to fall as snow (lower right quadrant).
- Refer to the 3-Week Forecast (click here) for the most up-to-date System information – pool levels, inflows, and releases.

Current Reservoir Levels

- **FORT PECK**: 14.1 feet below base of Annual Flood Control Zone.
- **GARRISON**: 4.4 feet below base of Annual Flood Control Zone.
- **OAHE**: 17.2 feet below base of Annual Flood Control Zone.
- **SYSTEM**: 9.2 MAF below base of Annual Flood Control Zone.
